HackerEarth is an AI-powered, developer assessment software that helps in measuring a developer's skills accurately through online coding tests. It takes a skill-based approach to assessments that allows companies to automatically generate standardized tests based on various skills and then accurately measure a developer's performance.

We proudly serve 500+ customers across the globe including Walmart, Amazon, Barclays, GE, Siemens, and more. We have assessed more than 1M candidates and support 35+ programming languages. We help recruiters to conduct assessments across 100+ different skills to hire the right candidate.

Additionally, HackerEarth has a community version of the product that is used by developers across the globe to assess their coding skills, become better at it, and measure their true potential. They do it by solving coding challenges across different topics/skills and by participating in online contests/hackathons. We have a thriving community of 3M+ developers.
